

Part C

Problem Number 2

Creating 2 Main Card for this problem :

- As a User, I want to get information regarding events, culinary, arts, entertainment, etc nearby the area.
- As a Management, I want to get information how many user click the news.

For this problem, requirement :

- CronJob, for run the application by schedule
- Library [x-ray](#), for crawl the new from news site
- Database, for storing result crawler
- hotjar, for measure interest feature by user

TODO Crawler Application

- cron job to run application
- create headless application that crawl news information
- using library <https://github.com/matthewmueller/x-ray>
- store result crawler as JSON string into database

TODO News Feature Application

- create service that showing the news based location
- create component in UI for displaying the information
- adding hotjar for maintain the news is effective clicked by user
